Hongyang Li

Founder, Aiyi Tech | Ph.D. Student, Zhejiang University

(+86)136-3436-6081 | zjulihongyang@gmail.com | github.com/EricLiZJU

Founder of Aiyi Tech, Ph.D. student in Management at Zhejiang University, and B.Eng. graduate of Harbin Institute of Technology. Focused on AI algorithms, multi-agent systems, quantitative finance, and enterprise AI applications, with experience in algorithm research, software architecture, and enterprise project development.

Entrepreneurship & Professional Experience

Aiyi Tech Founder Mar. 2026 – Present

aiyitech.top

- **Technology development:** Founded Aiyi Tech and developed core algorithms, product architectures, and enterprise software for fintech, AI applications, and business automation, turning research methods into usable systems.
- **Fintech products:** Developed **GridBot** for quantitative strategy research at futures investment institutions, and **FundFlow** for private fund operations, supporting data archiving, approval workflows, and process visualization.
- **Enterprise automation:** Developed an operational calculation system for business scenarios at **State Grid Zhejiang**, integrating data processing, calculation logic, and result generation into automated workflows.
- **AI training partnerships:** Signed AI training agreements with **Hangzhou Nizhiyou, Hangzhou Yangshengtang**, and other companies as part of Aiyi Tech's enterprise AI training business.

Shibei Investment Co., Ltd. Quantitative Strategy Research Intern Sep. 2024 – Dec. 2024

Researched equity return prediction, quantitative factor engineering, and deep learning model evaluation.

Selected Technical Project

AgentQT: Multi-Agent Quantitative Research Platform Lead Developer, Research Group Project

- **System capabilities:** Designed and developed a platform spanning strategy generation, validation, backtesting, risk control, and analysis. Connected a strategy workbench, strategy factory, and paper strategy lab to turn research ideas into testable strategies.
- **Agent collaboration:** Designed multi-agent workflows for market analysis, strategy routing, signal processing, risk management, and evaluation, supporting iterative candidate selection and stability assessment across time windows.
- **Engineering:** Built the platform with Python, FastAPI, and Vue; implemented persistent task states, retries, and recovery for ongoing research agents, supporting automated execution and traceability of complex research tasks.

Education

Zhejiang University Ph.D. Student in Management Expected Jun. 2028

Computational Social Science (Public Administration / Computer Science). Research: deep learning, financial time series, and multi-agent modeling.

Harbin Institute of Technology B.Eng. in Automation (Control Science and Engineering) Jun. 2023

National Second Prize, China Undergraduate Mathematical Contest in Modeling; Honors Bachelor's Degree and First-Class Scholarship, HIT Elite College.

Research Publication

Enhancing exchange rate forecasting with multi-scale residual LSTM and dual-task learning: An interpretable framework with SHAP analysis

Expert Systems with Applications, 319, 132095 **First Author** 2026

DOI: 10.1016/j.eswa.2026.132095

- Proposed a financial time-series framework combining **multi-scale residual LSTM, dual-task learning, and SHAP analysis** for exchange-rate forecasting and extreme-movement detection, demonstrating algorithm design, validation, and interpretation.

Technical Expertise

- **AI Algorithms:** Deep learning, time-series forecasting, multi-task learning, model interpretability.
- **Multi-Agent Systems & LLMs:** LLM agents, agent collaboration, task orchestration, automated decision-making.
- **Software Systems:** Python, C/C++, PyTorch, FastAPI, Vue, SQL, Linux.
- **Quantitative Finance:** Strategy research, factor modeling, futures backtesting, portfolio risk management.
